

Keeping Track of Lab Materials

Patrick – acetonitrile, argon

Mike – piperidine, HFIP, Pasteur pipettes

Stan – culture tubes, gloves

Yang – HPLC vials and caps, 0.2 micron filters, rubber septa/yellow caps

Kate – collidine, NMM, TFA

Will – polyprep columns, paper towels, pipette tips

Tuan – amino acids, resin, crystallography trays and hats

Sheng – DMF, syringes, needles

Notes: Check materials you are responsible for periodically (at least once a week). If we are *almost* out of something, please write it up on the board. Do NOT wait until we are already out before doing so. If you notice a material is almost gone, but you are not responsible for it, feel free to track down the person responsible and ask them if they've written it on the board.
