

NMR Facility User Guidelines

Gloves and masks are to be worn at all times. Gloves to be available outside the lab so they can be used to operate the keypad to gain entry. There is a table for gloves outside the FRH lab, and a rack fixed to the wall in NS1.

Dedicated data processing computers will only be available for remote access, local use will be disabled.

Only one user for each system at any time, no friends or helpers.

In 1403 NS1 there will only be one spectrometer and one computer.

In B106 FRH the three active instruments are each in different corners of the room, well separated from each other.

Facility will provide sanitizing spray but gloves are the best precaution for NMR as it is a high touch facility.
